Sequence 1571, Application US/09925300

Patent No. US20020151681A1

GENERAL IMPORMATION:

APPLICANT: Craig Rosen,
APPLICANT: Craig Rosen,
APPLICANT: Steve Ruben

ITILE OF INVENTION: Nucleic Acids, Proteins and Antibodies

FILE REFERENCE: PA10:
CURRENT APPLICATION NUMBER: US/09/925,300

CURRENT PILING DATE: 2001-08-10

PRIOR APPLICATION NUMBER: PCT/US00/05988

PRIOR APPLICATION NUMBER: PCT/US00/05988

PRIOR FILING DATE: 2000-03-08

PRIOR APPLICATION NUMBER: 50/124,270

PRIOR FILING DATE: 1999-03-12

NUMBER OF SEQ ID NOS: 1890

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO 1571

Sequence 2, Application US/09817198A
Patent No. US20020146758A1
GENERAL INFORMATION:
APPLICANT: YE, Jane et al.
TITLE OF INVENTION: ISOLATED HUMAN RAS-LIKE PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING THESE HUMAN RAS-LIKE
TITLE OF INVENTION: PROTEINS, AND USES THEREOF
FILE REFERENCE: CL001188
CURRENT FILING DATE: 2001-03-27
NUMBER OF SEQ ID NOS: 33
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 2
LENGTH: 212
TYPE: PRT
ORGANISM: Human
US-09-817-198A-2

Consensus quality: 108299 bases at least Q30
Consensus quality: 114299 bases at least Q20
                                       NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.redu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 71 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be as soon as it is available and the accession number will
as soon as it
be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

```
CC GC, where differential expression of Gs is indicative of GcA. Also included are modulating (M2) GA by contacting GC with an agent CC GC where differential expression of Gs is indicative of GGA. CC that alters the expression of at least one gene in Gs; (2) screening (M3) CC for an agent capable of modulating GCA or an inflammation (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC gene expression profile; (3) detecting (M4) an inflammation; (especially CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression of the gene is indicative of inflammation; (M5) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having conform Gs in the tissue. M1 is useful for detecting a tissue having conform Gs in the tissue. M1 is useful for detecting a tissue having conformation with an agent that modulates the expression of gene(s) from Gs in the tissue. M1 is useful for detecting GCA; M2 is useful for creening an agent capable of modulating GCA; M3 is useful for screening an agent capable of modulating GCA; M2 is useful for creening an inflammation (especially chronic) in a tissue, an allergic creperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, Crohn's disease, ulcerative colitis, cc parasitic infection, protozoal infection, fungal infection and M5 is useful for treating one of the above conditions. The present cof the printed specification, but was obtained in electronic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ABB34852 represent human secreted polypeptide sequences and proteins consologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissues can dealts the genes are expressed in Examples of activities include: cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; cantiallers; hepatotropic; antidiabetic; antiinflammatory; anticovaries and polypeptides are useful for cardiant. The polynucleotides and polypeptides are useful for creenting, treating or ameliorating a medical condition in e.g. humans, consider the preventing treating or ameliorating a medical condition in e.g. humans, consider the polypeptides are useful for chromosome identification. They are also useful as probes for concrease or decrease storage capabilities. The polynucleotides are cusful for chromosome identification. They are also useful as probes for daignosing a disorder related to the female reproductive system, capaticularly breast and/or ovary cancer. They are also useful in the gene therapy of breast and ovarian cancer. Nucleic acids, protein, antibodies, agonists and antagonists from the present invention are useful in the cardiovascular disorders, wound healing, neurological diseases and cardiovascular disorders, wound healing, neurological diseases and cardiovascular disease. ARC5957 to ARC59565 and ARA34772 represents sequence cused in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The polynucleotide sequences given in AAC59966 to AAC60015 encode the human secreted proteins given in AAB34773 to AAB34822. AAB34823 to AAB34852 represent human secreted polypeptide sequences and proteins homologous to them, which are given in the exemplification of the present invention. Human secreted proteins have activities based on the tissue of the present 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Fifty nucleic acid molecules encoding human secreted proteins, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 2528 BP; 772 A; 428 C; 545 G; 781 T; 2 other;

AC ANXX This sequence encodes a human Rab protein of the invention, designated RABP-2. The Rab proteins, RABP-1, RABP-2 and RABP-3 are involved in vesicle trafficking, cell function, and cell differentiation. The RABP collision of the provided polypeptides, DNAs and agonists can be used to prevent or treat a disorder associated with an increase in apoptosis, e.g. infectious or genetic immunodeficiencies, neurodegenerative diseases such as alzheimer's disease, Parklison's disease, anyotrophic lateral sclerosis, and cerebellar degeneration, myelodysplastic syndromes such as aplastic anaemia, ischaemic injuries such as myocardial infarction, stroke, and reperfusion injury, toxin-induced diseases such infarction, stroke, and reperfusion injury, toxin-induced diseases such as alcohol-induced liver damage, cirrhosis, and lathyriam, wasting diseases such as cachexia, viral infections, and osteoporosis. They can also be used to stimulate cell proliferation for use in transplantation or to produce cells to fight an infection or a cancer or to correct a fibrosis or Huntington's chorea. Antagonists can be used to prevent or

The DNA and protein sequences are cassociated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the cisolation and characterisation of the DNA and protein sequences of the cisolation and characterisation of the DNA and protein sequences of the cinvention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; cc antidaponist sequences exhibit cytostatic; immunosuppressive; cc antidiabetic; antifungal; antiparasitic and cardiant activity. The contropic; neuroprotective; antiparasitic and cardiant activity. The cc antidiabetic; antifungal; antiparasitic and cardiant activity. The cc polynucleotide and protein sequences are used in the diagnosis of cancer, cc particularly breast and ovarian cancer. The nucleic acid sequences, cc particularly breast and ovarian cancer. The nucleic acid sequences, cc particularly breast and ovarian cancer. The nucleic acid sequences, cc particularly breast and ovarian cancer. The nucleic acid sequences, cc particularly sequences and treatment of immune disorders e.g. Addison's disease, cc allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, rheumatoid casthritis and ulcoration of disease, multiple sclerosis, rheumatoid casthritis and ulcoration of disease, multiple sclerosis, rheumatoid
                                                                                                                                                                                                                                              arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such a cerebral anoxia and epilepsy; and infectious diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases -

xx the invention relates to novel isolated human secreted polypeptides (I) cand polypucleotides (II). (I) and (II) are useful for treating conditions such as arthritis, nephritis, crohm's disease, ischaemia-reperfusion injury, shock, sepsis, immune responses, and is call survival polypeptides (I), (II) and modulators of (II) are useful for cand remodeling. (I), (II) and modulators of (II) are useful for canding transgenic animals useful for studying the in vivo activities of coreating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides. (I) induces the proliferation of neural cells and regeneration of nerve (II) induces the proliferation of neural cells and regeneration of nerve (II) induces the proliferation of neural cells and avoytrophic lateral and brain tissue and is useful for treatment of central and various the proliferation of neural cells and avoytrophic lateral (II) in addition, (I) is involved in chemotactic or chemokinetic canding regulation of haematopolesis and as such as thrombocytopenia (II) and the proliferation of haematopolesis and is useful for treating myeloid activity, regulation of home, cartilage, tendon, ligament and/or nerve (II) is also useful for collegeneration or periodontal disease. Furthermore, (I) is also useful for collegeneration or regeneration and treatment of lung or liver fibrosis, of uprotection or regeneration and treatment of lung or liver fibrosis of uprotections, autolumune disorders equalities and conditions, such as asthma or other respiratory problems. (II) affects biorhythms or citradian cycles of rhythms, or addition, (II) affects biorhythms or citradian cycles of rhythms, or animous effects, immunoglobulin like canal gesic effects or other pain reducing effects, immunoglobulin like analysis effects or other pain reducing effects, immunoglobulin like analysis effects or other pain reducing effects.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              19-SEP-2000; 2000US-0665363:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activinjinhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

                                                                                                                                                                                                                                                                                                       The invention relates to novel nucleic acids encoding novel human foetal antigens. The nucleic acids and proteins are used to prevent, treat (e.g. CC by gene therapy) or ameliorate a medical condition in e.g. humans, mice, cc rabbits, goats, horses, cats, dogs, chickens or sheep. They cc rabbits, goats, horses, cats, dogs, chickens or sheep. They compared to a pathological condition. The antibodies to the antigens can also be used in alleviating symptoms associated with the disorders and in clude autoimmune diseases e.g. radioimmunoassays or enzyme linked communoascorbent assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis.

CC cardiovascular disorders e.g. neoplasms of the breast or liver, cc cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to regenerate tissues and in chemotaxis. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to regenerate tissues and in chemotaxis. The polypeptides can also be used to aid diseases and disorders treated by the nucleic acids and comminerals, cofactors and other nutritional components. Numerous capabilities, fat content, lipid, protein, carbohydrate, vitamins, companies of diseases and disorders treated by the nucleic acids and contents are given in the specification. The present sequence is a genomic DNA fragment from a gene encoding a foetal antigen of the

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL36176 ABL30511), expressed DNA sequences (ABL30840-ABL10847) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 1791 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                          CC expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal (FF) cells and a substrate of expressed sequence tags (EST). The ESTs CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC the FF cells and a substrate of expressed sequence tags (EST). The ESTs CC in a first filamentous fungal (FF) cell relative to expression of genes CC in a first filamentous fungal (FF) cell relative to expression of the global expression of genes from FF cells allows the production of the global expression of genes from FF cells allows the production of potential of the microorganisms to be improved. New genes may be constituted and gene copy number variation and stability can be constituted and gene copy number variation and stability can be constituted and gene copy number variation and stability can be constituted. The expression of genes can be vironmental stress, spore compineering. Using ESTs provides several advantages over genomic or random cDNA clones including elimination of redundancy as one spot on an array equals one gene or open reading frame, and organisation of the microorrays based on function of the gene products to facilitate microarrays based on function of the gene products to facilitate consists of the results. AAF14878 to AAF14878 represents ESTs from Aspergillus oryzae; and call spore; AAF11894 to AAF14878 represents ESTs from Aspergillus oryzae; and call spore; fically claimed in the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (NOVO)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Multiple gene expression; filamentous fungal cell; EST; expressed sequence tag; Fusarium venenatum; Aspergillus niger; Aspergillus oryzae; Trichoderma reesel; identification; recombination; culture condition; environmental stress; spore morphogenesis; metabolic pathway engineering; catabolic pathway engineering; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Monitoring differential expression of genes in filamentous uses fluorescence-labeled nucleic acids isolated from the substrate of expressed sequence tags -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Aspergillus oryzae

(I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPCR) primers of the polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC diagnostics coding sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   US-09-820-003A-2 (1-173) x AAS83860
